### **INDUSTRY STATISTICS WORKING GROUP**

- **DBI Construction Web Lookup Express**

Datamotive Business Intelligence (DBI) have now finalised the development of their Construction Web Lookup Express program which provides specification data on all product groups within the DBI statistical system. This specification data covers all of the major product features of each machine.

A comparison tool allows users to select market segments, ERG class and individual models. This tool enables users to compare three separate models in any product group against each other in terms of their specifications. This will be particularly useful in comparing various models within a specific manufacturer's product range or for comparing models between different manufacturers.

DBI are conducting final testing on the site and checking on all model specifications prior to final release of the program in the 4<sup>th</sup> quarter of 2010.
